DETAILED ACTION

Response to Amendment

Allowable Subject Matter

1. The indicated allowability of claims 2 and 5-22 is withdrawn in view of the newly discovered reference(s) to Ishida et al. (US 6,754,142 B2). Rejections based on the newly cited reference(s) follow.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 3, and 5-22 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-28 of U.S. Patent No. 6,754,142. Although the conflicting claims are not identical, they are not patentably distinct from each other because the media cartridge of claim 1 is formed to have the same shape as that of disk storage medium mounted on a disk drive for accessing said disk storage medium and comprising not less than one attachment unit for holding a small sized storage medium so as to be accessible by access means provided at said disk drive and further comprising an unit to be detected for the

Art Unit: 2653

position detection for detecting a position of said small-sized storage medium by position detection means provided on the side of said disk drive as disclosed in claim 3 of US Patent No. 6,754,142 B2.

The media cartridge of claim 7 is covered in claims 1-2 of US Patent No. 6,754,142 B2. It would have been obvious to one of ordinary skill in the art at the time the invention was made to place each of the attachment units at every angle of 90 degrees relative to the center of the cartridge. The rationale is as follows: One of ordinary skill in the art at the time of the invention would have been motivated to place each of the attachment units at every angle of 90 degrees relative to the center of the cartridge so that the attachment units are located at equal positions from each other.

The media cartridge of claim 10 is disclosed in claim 4 (i.e., identification means for identifying an attached media as said media cartridge or said disk storage medium) of US Patent No. 6,754,142 B2 and the media cartridge of claim 22 is covered in claim 27 (i.e., wherein said small sized storage medium is a smart media) of US Patent No. 6,754,142 B2.
